elegant analysis with R

Mark A. Olson

Contents

Contents	iv
List of Figures	x
Preface	xiii
1 Introduction	1
1.1 Why a Special Book?	1
1.2 Partial Outline	2
2 The Tao of Research	4
2.1 The Problem of Scientific Inference	4
2.2 Causality	11
2.3 Confounding	12
2.4 Deduction	12
2.5 Induction	13
2.6 Randomization	14
3 What is an Experiment	18
3.1 Causality, Correlation, Independence	19
3.2 Background	19
3.3 Causality and nonrandomized research	20
3.4 Does Correlation Imply Causation	20
3.5 Independence and Correlation	21
3.6 Natural Experiments	21

4 Zen of economic experiments	22
4.1 Description	22
4.2 Types of economic experiments	23
4.3 Early Experiments	24
4.4 Randomization in Economic Experiments	25
4.5 Experimental Bias	25
4.6 Repeating Trials	25
4.7 Replications	27
4.8 Structure of the Economic Experiment	27
5 Experimental Model	28
5.1 Model dependent inference	28
5.2 Probability Models	29
5.3 Models	29
6 Design Choices and Design Problems	30
6.1 The Design	31
6.2 Fundamental assumptions of experimental design	31
6.3 Experimental design	31
6.4 Data Pooling and Simpson's Paradox	36
6.5 Regression Toward the Mean	41
6.6 Regression Fallacy	41
6.7 The Ecological Fallacy	42
7 Preliminaries	43
7.1 Types of Data	43
7.2 Experimental Terms	46
7.3 Types of Analysis	49
7.4 Statistical Testing	51
7.5 How are We to Judge Which Test to Use?	51
8 Hypothesis Testing and Significance	54
8.1 What is Hypothesis Testing?	54
8.2 Null Hypothesis	56
8.3 Hypothesis Testing Assumptions	56
8.4 Probability Models	57
8.5 Randomization Model	59
8.6 Alpha α	59
8.7 P -value	59
8.8 Problems with Hypothesis Testing	61

8.9 Confidence Intervals	61
8.10 Practical vs. Statistical Significance	61
8.11 Wald Missing Data example	62
8.12 One or Two Sided Tests?	62
8.13 Multiple Testing	66
8.14 Applying More Than One Test	67
8.15 Power of Test	68
8.16 Power and Effect Size	69
8.17 Power for Binomial Example	70
8.18 Sample Size	71
8.19 Binomial Conf Interval Sample Size	72
9 Data Analysis	76
9.1 Arranging Your Data	76
9.2 Check the Data	76
9.3 Descriptive statistics	79
9.4 Statistical Tests	88
9.5 Test for Normality	93
9.6 Randomization Test Procedure	97
9.7 Bootstrap	99
9.8 Asymptotics	100
9.9 Robustness	101
9.10 Violations and Type I Error	101
9.11 Violations for the T -test	101
10 Rank Tests	103
10.1 Essential Assumptions	104
10.2 Sign Test	104
10.3 Wilcoxon Test	104
10.4 Kruskal-Wallis Rank Sum Test	107
10.5 Kolmogorov-Smirnov	109
10.6 Grouped Observations	114
10.7 Other Tests	114
10.8 Siegel-Tukey	114
10.9 Median test	114
10.10 Trend Test	115
11 Single Observations	116
11.1 Simple Single Observation per session	116
11.2 ANOVA	118

11.3	Anova Assumptions	118
11.4	Violations of Anova Assumptions	118
11.5	F Ratios	120
11.6	Multivariate Regression	120
11.7	Post hoc Testing	122
11.8	Discrete	123
11.9	Discrete Models Based on Counts	123
11.10	Categorical	124
11.11	Ordinal	125
11.12	Categorical Ordinal	125
12	Case Study	127
12.1	Comparing Two Distributions	128
12.2	WMW assumptions	132
12.3	Kruskal-Wallis	132
12.4	Kolmogorov-Smirnov	132
13	Multivariate Observations	133
13.1	MANOVA	133
13.2	Multivariate Ordered Categorical Data	133
14	Dependent Observations	134
15	Repeated Observations	136
15.1	Power Repeated measures	136
15.2	Aggregate Single Observation	136
16	Traditional MANOVA and ANOVA	137
16.1	Unstructured Multivariate Approach	137
16.2	Univariate ANOVA	138
17	Mixed-Effects models	140
17.1	Regression	141
17.2	Random-Effects Models	141
17.3	Linear Mixed Effects	142
17.4	Basic Model	144
17.5	Estimation	145
17.6	Assessing Models	146
17.7	Hypothesis Tests for Fixed-effects Terms	147
17.8	Multiple levels	147
17.9	Heterogeneity	148

17.10	Bootstrapping Mixed-Effects Linear Model	149
17.11	Bayesian Mixed-Effects Models	150
18	Data Presentation	151
18.1	You have the data, now what?	151
18.2	Making Visual Displays	152
18.3	Principles for Effective Visual Display of Data	152
18.4	Box and Whiskers Plot	154
18.5	Interpretation of boxplots	155
18.6	Making Tables	156
18.7	Making Tables and Growing Cucumbers	156
18.8	What to Report	162
I	Two	164
19	Individual Behavior	165
20	Single-Case Designs	166
21	Testing Single Sample Designs	167
21.1	Single-sample Testing	167
22	Possible Additions	169
22.1	Incomplete	169
22.2	Meta-analysis	169
22.3	Brain Imaging	169
22.4	Text Analysis	169
22.5	Path Models	169
22.6	Factor Analysis	170
22.7	Effect Size	170
22.8	Completely randomized factorial designs	172
22.9	Legal Evidence	173
22.10	Hints and Tools	173
22.11	What to Do	174
22.12	Other Things	174
22.13	General Linear Model	174
22.14	Overview	175
22.15	Components of the GLM Model	175
22.16	Examples	176

A R	178
A.1 What is R?	178
A.2 List of Helpful Web Sites	178
A.3 Starting R	179
B Reproducible Research	185
C L^AT_EX	186
D Probability Distributions	187
D.1 Special Distributions	189
E Normal Distribution	190
E.1 Normal Properties	190
F Proofs	194
F.1 Proof of KS Distribution Free	194
Glossary	195
Acronyms	197
Bibliography	199
Index	215

List of Figures

- 6.1 Example of pooling male and female observations. Males and females are in different proportions for the treatments A and B. Pooling male and female groups give the appearance that A is larger than B. But separately B is larger than A for each subgroup. 39
